

-Statement of Work-

I made a Project about work intensive care unit. There are patients, doctors and intensive care unit. Each patient can have a different doctor or different doctors from the other patients. At the same time each doctor can be specified different to cure a patient or patients from other doctors. There are lots of patients and doctors. Hard to use all in different classes. So that is a problem while notifying doctors, adding patients and deleting them. For example when we thought about a patient who is Ali, he has a specific doctor who is Ahmet. When he had a problem just Dr. Ahmet should be notified. Not all of the doctors. That would be a matter if we noticed all.
